transforming the health of our community

Women's & Children's Hospital

## Your gift will help create a new women's and children's hospital

Asante is committed to continue addressing the unique needs of women's and children's health through elevating its services, technology and facilities. A new patient pavilion on the Asante Rogue Regional Medical Center campus will house a Women's and Children's Hospital on the top two floors, transforming the future of health care for our community's next generation.

For more than 30 years, Asante Rogue Regional has served as a Children's Miracle Network designated hospital. The destination treats patients across Asante's nine-county service area, allowing young children and their families to stay close to home and receive specialized treatments and care, including the region's only neonatal intensive care unit (NICU) and pediatric oncology services. Additionally, Asante offers specialized treatment for women, including obstetrics and gynecological services, a Maternal Fetal clinic to assist women through high-risk pregnancies, all the way through labor and delivery.

From the first moment a baby is born through childhood, and the span of a woman's lifetime, this facility will streamline care and elevate safety for patients and their families. *You can be part of the team that makes this a reality for our community.*

### Improve access to advanced care for women

Through integrating women's health services, patients can receive a full spectrum of services to maintain good health throughout all stages of life.

Giving birth can be one of the most profound experiences of a woman's life. The new patient pavilion will provide enhanced family-centered spaces with:

- 14 labor and delivery rooms
- 2 C-Section rooms, giving patients access to an additional surgical suite
- A designated area for an OB Emergency Department, providing 24/7 support for emergency situations during pregnancy
- A home for Maternal Fetal programs and physicians to assist women through high-risk pregnancies

Additionally, specialists on the sixth floor will provide advanced medical therapies for women of all ages and stages of their maternal and reproductive health.

## Give our region's smallest babies the very best support

Each year, the Asante NICU touches the lives of 350 babies. Specialists are always ready to provide lifesaving medical care for babies born too soon, too small, or with other health problems, and ensure they are nurtured and loved until they gain the strength to thrive at home. The new unit will have capacity to care for 32 babies in private rooms so that families can have their own spaces to be with their babies as they develop. Each room will be standardized to accommodate a more acute NICU patient or an infant that is slightly more developed who requires a special care nursery. Having all NICU and special care patients on the same floor, in private rooms, will allow specialists to remain centralized and provide families the privacy they desire, increasing the overall patient experience.

## Provide compassionate care for children with profound medical needs

As the population in our region expands, the need for specialized pediatric services continues to evolve. Whether it's chronic disease, broken bones, a virus or cancer, thousands of families depend on Asante for this care each year. The pediatric department treats children between three days and 17 years old (completed), requiring medical staff with special certifications and experience to care for the most acute situations.

*The women's and children's hospital will be located on the top two floors of the pavilion.*

In the current department, space is a premium and rooms are small, making it challenging to accommodate families, comfortably. The new unit will offer patients and families double the square-footage, allowing for 16 private rooms so that patients and loved ones are more comfortable.

## Create a designated pediatric outpatient infusion unit designed for children

Asante Rogue Regional has the only pediatric oncology program between the Bay Area and Portland, thus families do not have to travel outside of the region to receive specialized chemotherapies and cancer treatments. Additionally, this area can provide infusions for a variety of illnesses and diseases children face. The pediatric floor will be home to an outpatient infusion unit with one exam room and three infusion bays. This outpatient infusion area will be located within its own designated space on the floor, keeping children with compromised immune systems separate from other ill children in the pediatric unit receiving treatment.

## Your generosity will raise the bar on women's and children's health

Through your support, you can help Asante invest in the future of our community. The facility will provide specialized care for women and children and offer them an experience that will be unrivaled in our region.

In order for this to be possible, we are depending on the generosity and compassion of donors like you. Gifts can be made using the timeline and vehicle that best meets your philanthropic needs.
